## IN THE CLAIMS:

Please cancel Claim 10 without prejudice or disclaimer, add new Claim 13, and amend Claims 1, 11, and 12 as follows:

(Currently Amended) An eyeglass frame, comprising:
 a-support for supporting at least one lens in the path of a wearer's field of view;

a first ear stem attached to the support, for extending in a posterior direction along a first side of the wearer's head;

a second ear stem attached to the support, for extending in a posterior direction along a second side of the wearer's head;

at least one microphone disposed in at least one of the support, first ear stem, and second ear stem supported by the frame, the microphone being arranged to face towards a head of a wearer of the eyeglass frame; and frame;

a wind sock disposed over the at least one microphone, the wind sock having a shape complimentary to a shape of an outer surface of the frame surrounding the microphone; and

a transceiver supported by at least one of the support, the first ear stem, and the second ear stemthe frame, the transceiver being configured to wirelessly transmit a digital signal representative of an output of the microphone.

- 2. (Original) An eyeglass frame as in Claim 1, further comprising a baffle configured to attenuate wind turbulence in the vicinity of the microphone.
- 3. (Original) An eyeglass frame as in Claim 1, wherein said transceiver is positioned within at least one of the support, the first ear stem, and the second ear stem.
- 4. (Original) An eyeglass frame as in Claim 3, wherein the transceiver is configured to transmit a readable signal no more than about twenty yards.
- 5. (Original) An eyeglass frame as in Claim 1, wherein the microphone is configured to face upwardly and toward a head of a wearer.
- 6. (Original) An eyeglass frame as in Claim 1, wherein the microphone is configured to face horizontally and toward a head of a wearer.
- 7. (Original) An eyeglass frame as in Claim 1, wherein the microphone is configured to face downwardly and toward a head of a wearer.

Appl. No. : 10/628,212 Filed : July 28, 2003

8. (Original) An eyeglass frame as in Claim 1, wherein the microphone is supported on a lower edge of the support, below the lens.

- 9. (Original) An eyeglass frame as in Claim 1, wherein the support comprises a pair of orbitals supporting the at least one lens and a second lens, respectively, a bridge connecting the orbitals, the microphone being supported by the bridge.
  - 10. (Canceled)
  - 11. (Currently Amended) An eyeglass frame, comprising:
  - a support including first and second orbitals supporting first and second lenses, respectively, and a bridge connecting the orbitals;
  - a first ear stem attached to the support, for extending in a posterior direction along a first side of the wearer's head;
  - a second ear stem attached to the support, for extending in a posterior direction along a second side of the wearer's head;
  - at least one microphone supported by the bridge, the microphone being arranged to face away from a wearer of the eyeglass; and
  - a wind sock disposed over the microphone, wherein the wind sock includes an outer surface shaped complimentarily to the bridge.
- 12. (Currently Amended) An eyeglass frame as in Claim 11, wherein the <u>outer</u> surface of the wind sock does not protrude outwardly from a surface of the bridge surrounding the wind sockto the bridge.
- 13. (New) An eyeglass frame as in Claim 1 additionally comprising a support for supporting at least one lens in the path of a wearer's field of view, a first ear stem attached to the support, for extending in a posterior direction along a first side of the wearer's head, a second ear stem attached to the support, for extending in a posterior direction along a second side of the wearer's head, wherein the microphone is disposed in at least one of the support, first ear stem, and second ear stem.
